

# KWIKBOOST EDGEPOWER®

Empowering Education with Luxor Workspaces

## Case Study

### Background

Mary Lib Saleh Euless Library, a cornerstone of the growing Texas community, faced the challenge that many educational institutions have been facing in recent years: an increasing demand for power outlets to keep patrons' devices fully charged throughout the day. When the library underwent remodeling, the team believed they had sufficient power plugs, only to realize the perpetual need for more with their patrons' increasing reliance on laptops and mobile devices.

### The Challenge

In today's landscape, technology plays a vital role in facilitating learning and research. However, the scarcity of power outlets can often hamper the learning experience. Schools and libraries alike have faced the pressing need to provide students and patrons with readily available power for their devices throughout the day.

For organizations like Mary Lib Saleh Euless Library, traditional outlets were not meeting the demand, prompting Library Services Supervisor, Mollie Myers, to seek a flexible and reliable charging solution. "In the library world one can never have enough plugs!" she stated in her communications with Luxor.

The challenge was clear: They needed a reliable, secure, and user-friendly solution to meet the growing demand for charging opportunities.

### The Solution

Mary Lib Saleh Euless turned to Luxor Workspaces and their line of KwikBoost EdgePower cordless charging stations to address their power outlet shortage. The library staff and patrons soon discovered the numerous advantages of the on-demand power solution:

The stations delivered exceptional battery life. Library staff were initially charging the stations every night, but found that the battery life exceeded expectations, and that the stations only needed to be replaced when a patron reported a drained unit. This not only saved staff time but also improved the overall user experience.

Patrons found the EdgePower stations easy to use, and they accommodated a wide range of devices, including laptops, tablets, and phones. The simplicity of the stations contributed to a hassle-free charging experience, enhancing the library's reputation as a technology-friendly environment.

Library staff appreciated the built-in theft prevention measures of the charging stations. While they could be moved with relative ease, they were clamped securely to tables using a hex key. Despite the stations' mobility, there were no reported thefts, as to the stations' size and weight, made them difficult to remove unnoticed.

**"We love our KwikBoosts. The battery life is amazing, they are heavily used by our patrons, and we haven't had a single one stolen in the two years we've had them."**

Mollie Myers | Euless Library Services Supervisor

## Impact on User Experience

The introduction of EdgePower charging stations had a substantial impact on Euless Library's educational mission. By addressing the lack of power outlets, the library enhanced its role as a technology-equipped resource center for both students and patrons. The benefits of EdgePower products were clear:

### Improved Learning Environment:

The availability of power outlets ensured library patrons could utilize their devices without interruptions caused by low battery levels.

### Increased Patron Satisfaction:

Patrons were delighted with the convenience and reliability of the charging stations. The positive feedback further solidified the library's community-focused mission.

### Resource Optimization:

The efficient use of battery life and reduced maintenance allowed the library to optimize its resources and allocate staff time to more pressing tasks.

## A Lifelong Learning Partnership

Under Mollie Myer's recommendation, Mary Lib Saleh Euless Library purchased additional EdgePower products, expanding their charging station network and ensuring that more users could benefit from these valuable resources.

The library's successful implementation of EdgePower products exemplifies the positive impact these solutions can have in addressing the pressing challenge of inadequate power outlets in learning institutions.

With their user-friendly EdgePower line, Luxor Workspaces continues to empower educational organizations to create more accessible, technology-driven learning environments for years to come.
